## KAJEET® SUCCESS STORY

# Mobile County Public Schools: Program Insights & Visibility

**Mobile County Public Schools (MCPSS) is a diverse school district serving 52,000 students across southwestern Alabama.**

Seeking a digital equity solution to keep their students connected to the Internet outside of school walls, MCPSS purchased WiFi hotspots from a major wireless carrier. But with no visibility into which hotspots were assigned to which students, or how students were using them, it was difficult for district administrators to manage. A security issue — and slow carrier response — was the final straw.

When MCPSS connected with Kajeet, they quickly saw that the program management and real-time insights provided by the Sentinel® platform are a game changer. Now, administrators at each of MCPSS's 92 schools can manage device assignment, share data across devices and carriers, and enjoy peace of mind knowing that their Kajeet SmartSpot® WiFi hotspot devices are secure at the SIM card level.

MCPSS has also used the SmartSpot devices to provide on-the-go connectivity to its homeless student population, as well as sports and robotics teams who travel for competitions.

## Mobile County
### PUBLIC SCHOOLS

"Our district is so huge that coverage varies a lot — so it's a huge plus that we're able to use different wireless carriers for different areas of the county. **Kajeet over-delivered and has been a vital partner** as we look to advance digital equity in our district."

**Carrie Rozycke**
Telecommunications Support Specialist, Mobile County Public Schools
